

Debugging a Note Taking App

There were a few bugs in the code and the HTML. Here are the bugs I detected and how I fixed them:

Home route

1. The Flask app expects a 'POST' request as specified in the '@app.route' decorator but the 'GET' method also needed to be specified.
2. The route did not have a condition for the method attribute but had a return statement. I added the if statement for the 'POST' method.
3. The 'request.args' should have been 'request.form' since we are using the 'POST' method.

Home HTML

1. The form has no 'method' attribute specified. To fix this I changed the form tag to '`<form method='post' action='/'>`'
2. There was no spacing between notes and % in '{% for note in notes %}'
